

PRESS RELEASE

US Patent Submitted – Patent Pending

June 5, 2015 - South Jordan, Utah: After a considerable amount of work that has been undertaken by our Patent Attorneys with Thorpe, Northern and Western LLP, a United States Patent application has now been submitted.

President of RSA Network Inc., Randy Sorenson stated today: “We are now confident that our investment to develop this product can be protected with this Patent Application being submitted today”.

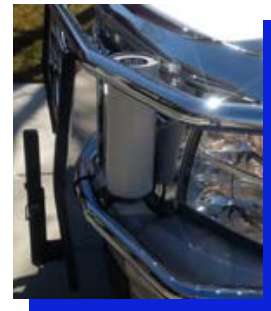

Demonstrations are being conducted to show how this amazing product and the technology works to various State Department of Transportation Departments. These demonstrations have shown how the States can document the height of these various assets with confidence, ease and much safer than placing personnel on a highway with a survey pole to collect this information.

RSA Network Inc.’s, new Laser Height Pole product has the capability of measuring an overhead object as small as ¼” in diameter at highway speeds. The software utilized can be used to inventory these overhead structures and works with a GPS coordinate system.
